Ask anything

Use this **quick reference cheat sheet for core Jupyter Book commands, configuration files, and MyST Markdown syntax**.

CLI Commands

Run these commands in your terminal (shorthand `jb` works for `jupyter-book`): Jupyter Book

- `jupyter-book create <mybook>`: Generate a new template book folder.
- `jupyter-book build <mybook>`: Compile your book source files into HTML.
- `jupyter-book clean <mybook>`: Clear the build directory outputs.
- `jupyter-book config <mybook>`: Inspect your configuration settings. YouTube · Teaching and... +1

Core Configuration Files

- `_config.yml`: Manages metadata (title, author, logo, copyright) and extension flags.
- `_toc.yml`: Defines the structural chapter and page order of your publication. Jupyter Book +3

Example `_toc.yml` Structure

yaml

```yaml
format: jb-book
root: intro
chapters:
- file: chapter1/file1
- file: chapter2/file2
```

markdown

```
```{code-cell} ipython3
print("Hello from Jupyter Book!")
```
```

Use code with caution.

Admonitions (Callout Boxes)

markdown

```
```{note}
This is an informative note block.
```

```{warning}
Pay close attention to this warning.
```
```

Use code with caution.

Figures and Targets

markdown

```
```{figure} path/to/image.png
---
name: my-fig-id
```
```

MyST syntax cheat sheet - Jupyter Book

In order to reference a table you must add a label to it. To add a label to your table simply include a :name: parameter followed ...

Read the Docs

Configuration reference

You can configure Jupyter Book with a YAML configuration file called _config.yml. This file controls a number of options and featu...

Show all

the _toc.yml example is not very clear. what does this _toc.yml translate to?

The standard `_toc.yml` structure directly dictates how your final sidebar navigation and reading sequence will look.

The example provided translates to a book with a dedicated landing page (**intro**) and two primary sections (**chapters**). Here is exactly how that structure translates to a real book website:

- `file: chapter1/file1` **Chapter 1** (points to the file at `chapter1/file1.md`).
- `file: chapter2/file2` **Chapter 2** (points to the file at `chapter2/file2.md`).

How it looks vs. How it navigates

In Your Sidebar Navigation	Reading Order (Next)
Welcome (Intro)	1. Introduction
Chapter 1	2. Chapter 1
Chapter 2	3. Chapter 2

Adding Sub-sections (Sections)

If you want to nest pages inside a chapter, you use the `sections` key. Here is a more realistic translation:

yaml

```yaml
format: jb-book
root: intro
chapters:
  - file: chapter1/index
    sections:
```

+

- Lesson 1 (Nested under Chapter 1)
- Lesson 2 (Nested under Chapter 1)

Would you like help **structuring a specific layout** for your own book, or are you looking to add features like **numbered chapters** or **external links** to your sidebar?

can you give me a basic outline to how i install on ubuntu, and an introductory walkthrough for an example jupyter ...

1. Ubuntu Installation Outline

Open your terminal and run these commands to install **Jupyter Book** using a Python virtual environment (recommended to prevent package conflicts).

bash

```
# 1. Update your package list and install Python pip + virtual env
sudo apt update
sudo apt install python3-pip python3-venv -y

# 2. Create a virtual environment named 'jb-env' in your current d
python3 -m venv jb-env

# 3. Activate the virtual environment
source jb-env/bin/activate
```

featuring an introduction page and two chapter files (one standard Markdown file, and one interactive Jupyter Notebook for ECG data analysis).

Step 1: Generate the Book Blueprint

Run the build command to generate a template directory structure:

```bash
jb create biomed-book
cd biomed-book
```

Use code with caution.

Step 2: Define the Table of Contents (`_toc.yml`)

Open `_toc.yml` in your text editor and replace its contents with this structure:

```yaml
format: jb-book
root: intro
chapters:
  - file: instrumentation
  - file: ecg_analysis
```

Use code with caution.

Step 3: Create the Pages

Create three files inside your `biomed-book/` folder:

```
* **Chapter 2:** Digital ECG Filtering (Interactive Lab)
```

Use code with caution.

File 2: `instrumentation.md` (Chapter 1 Theory)

markdown

```
# Biomedical Instrumentation

This chapter introduces the fundamental electronics used to captur

## Operational Amplifiers
In biomedical applications, weak biological potentials (like micro

```{note}
Always ensure proper electrical isolation when designing circuits
```
```

Use code with caution.

File 3: `ecg_analysis.ipynb` (Chapter 2 Notebook)

Create a Jupyter Notebook file named `ecg_analysis.ipynb`. You can paste this Python code block into a code cell inside it to simulate reading and plotting an Electrocardiogram (ECG) wave:

python

```
import numpy as np
import matplotlib.pyplot as plt
```

Use code with caution.

Step 4: Configure Book Settings (`_config.yml`)

Open `_config.yml` and quickly update the metadata:

yaml

```yaml
title: Biomedical Signals & Diagnostics
author: BME Department
logo: logo.png # You can leave this blank or drop an image here la
execute:
  execute_notebooks: force # Forces Jupyter Book to run and execut
```

Use code with caution.

Step 5: Build the Book

Compile your Markdown files and execute your Jupyter Notebooks into a finished website directory:

bash

```bash
jb build .
```

Use code with caution.

Step 6: View Your HTML Book

would you like to explore how to add **mathematical LaTeX equations** (like Fourier Transforms for signal filtering) to your pages, or do you want to learn how to **host this book online for free** via GitHub Pages?
